

## UBVRI PHOTOMETRY OF SOUTHERN BRIGHT STARS\*

Eugenio E. Mendoza V.\*\*

## Sumario

Se han obtenido observaciones fotoeléctricas en el sistema R,I de Johnson para 195 objetos del Hemisferio Sur y listados en el Catálogo de Estrellas Brillantes.

Los pequeños errores probables encontrados en este trabajo indican que la presente fotometría es de la misma calidad que la realizada por el grupo de Johnson en el Laboratorio Lunar y Planetario de la Universidad de Arizona.

Los resultados obtenidos se han utilizado para formar, la primera parte (de dos) de un catálogo UBVRI para el Hemisferio Sur y así completar este sistema para todas las estrellas más brillantes que  $V = 5.0$ .

At the present time a large number of the Northern Bright Stars have been observed in the UBVRI system (Johnson, Mitchell, Iriarte, and Wisniewski, 1966). However, most of Southern Bright Stars lack of R and I observations. A small number of them have been observed in the red and infrared by Kron, Gascoigne, and White (1953, 1957), by Iriarte (1965), and by Mendoza (Mendoza and Johnson, 1965 and Johnson *et al.*, 1966).

We have made R and I measurements of 195 southern objects contained in the Catalogue of Bright Stars (Hoffleit, 1964) using exactly the same detector and filters (R, I photometer) of the Catalina observers (Lunar and Planetary Laboratory, University of Arizona; Johnson *et al.*, 1966). These observations were obtained with the 16-inch telescope of Cerro Tololo Inter-American Observatory.

The standard stars are also the same used at the Tonantzintla Observatory (BVRI system) and they are listed in Table 1. The columns of Table 1 contain: first, the Bright Star (BS) Catalogue number (Hoffleit, 1964); second, the name of the star; third, the MK-type; fourth through eighth, the V magnitude and the B-V, U-B, V-R and R-I color indices, respectively; and, lastly, the number of independent observations made at Tololo in February 1966.

The new observational data have been combined with the UBV photometry given by Johnson *et al.* (1966) and listed in Table 2. The columns in Table 2 contain: first, the BS number; second, the name of the star; third, the MK-type (except for those spectral types given in parenthesis, which are taken from the Bright Star Catalogue — Hoffleit, 1964); fourth through eighth, the V magnitude and B-V, U-B, V-R, R-I color indices, respectively; ninth, the number of different nights in which R and I were obtained; tenth, remarks.

A number of stars in Table 2 are variable or suspected of variability (see per example, Cousins and Stoy, 1963). The individual observations of this kind of stars are found in Table 3. The columns in Table 3 contain: first, the BS number; second, the R-I color index; and, lastly, the Julian Day.

The estimated probable errors of a single observation at 1.0 air mass are:

$$R = \pm 0.015 \text{ mag. and } R-I = \pm 0.010 \text{ mag.}$$

The comparison of Tololo and Tonantzintla R magnitudes and R-I colors is shown in Figures 1 and 2. The result is very satisfactory.

We are indebted to Dr. H. L. Johnson for the detector and filters used in this work, to Dr. S. van den Bergh and The Morenos for their unpublished data and to AURA, Inc. for a grant and observing facilities.

\* Contribution from the Cerro Tololo Inter-American Observatory N° 11.

\*\* Visiting Astronomer, 1966, Cerro Tololo Inter-American Observatory.

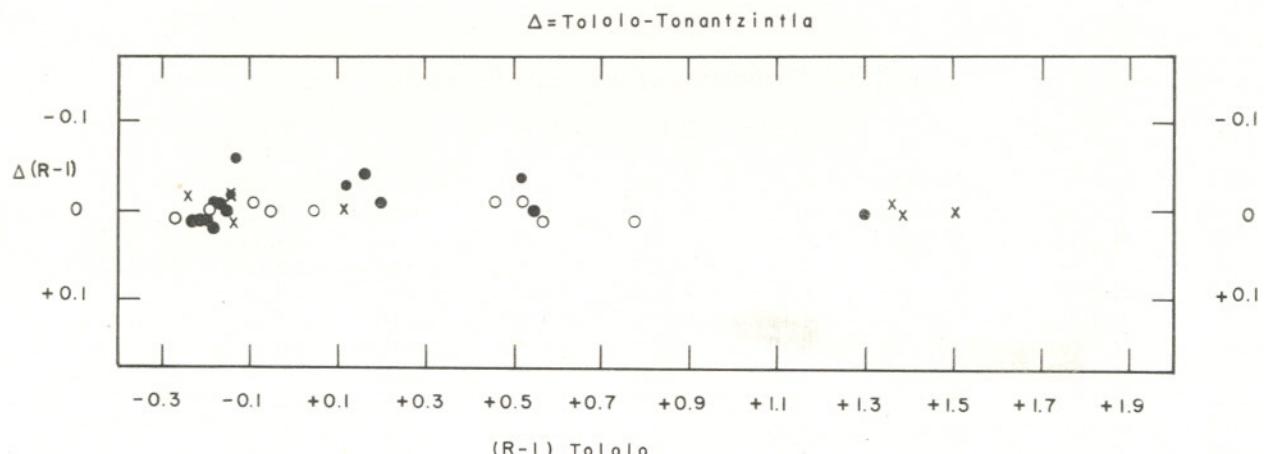

Fig. 1.—The comparison of Tololo and Tonantzintla  $R-I$  colors. Open circles represent the stars from Table 1; filled circles represent the stars from Table 2, and crosses represent the stars from Table 3.

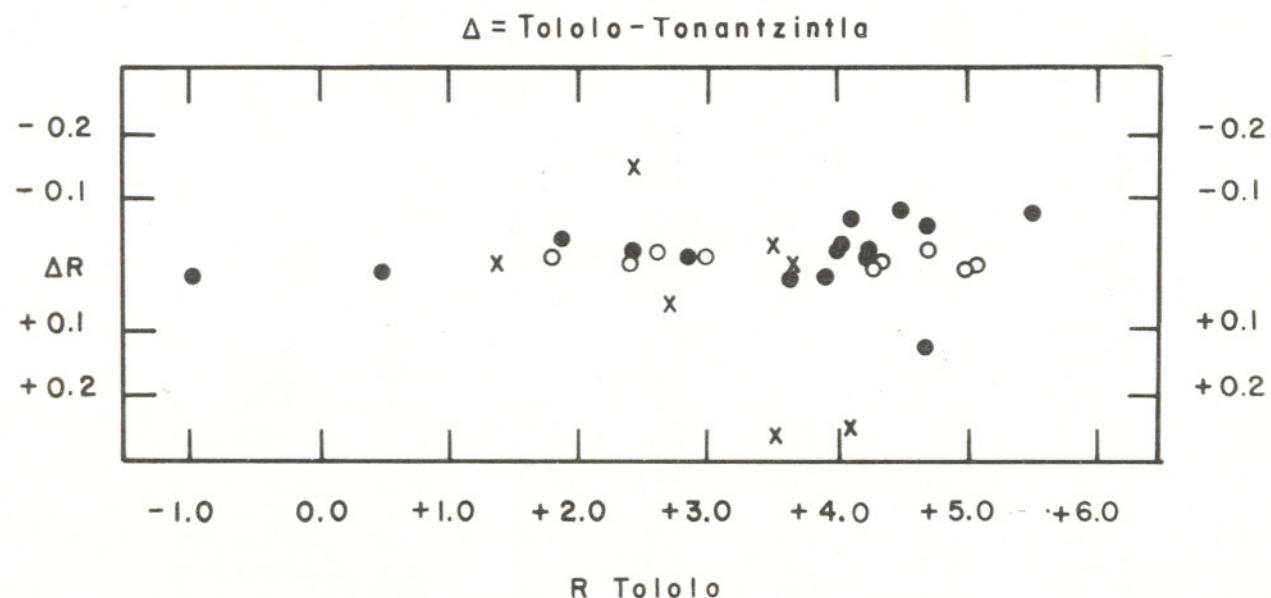

Fig. 2.—The comparison of Tololo and Tonantzintla  $R$  magnitude (see Fig. 1).

## Notes to Table 2

- 1.—Variable or suspected of variability; see Table 3.
- 2.—Eclipsing Binary.
- 3.—Known physical binary.
- 4.—V and B-V from Catalogue of Bright Stars (Hoffleit, 1964). Harvard photovisual magnitudes are corrected by -0.09 mag. (see Johnson *et al.*, 1966).
- 5.—R, I photometry made with a 1'.0 diaphragm.
- 6.—Spectroscopic Binary.
- 7.—A fainter star included in the diaphragm used.
- 8.—R, I photometry made with a 1'.5 diaphragm.
- 9.—UBV from Van den Bergh (1966).
- 10.—UBV from Feinstein (1963).
- 11.—UBV from Moreno and Moreno (1966).
- 12.—U-B from Moreno and Moreno (1966).
