# The interplay between baryons and dark matter in galaxies

Mariya Lyubenova (Kapteyn)

G. van de Ven (MPIA), J. Falcón-Barroso (IAC)

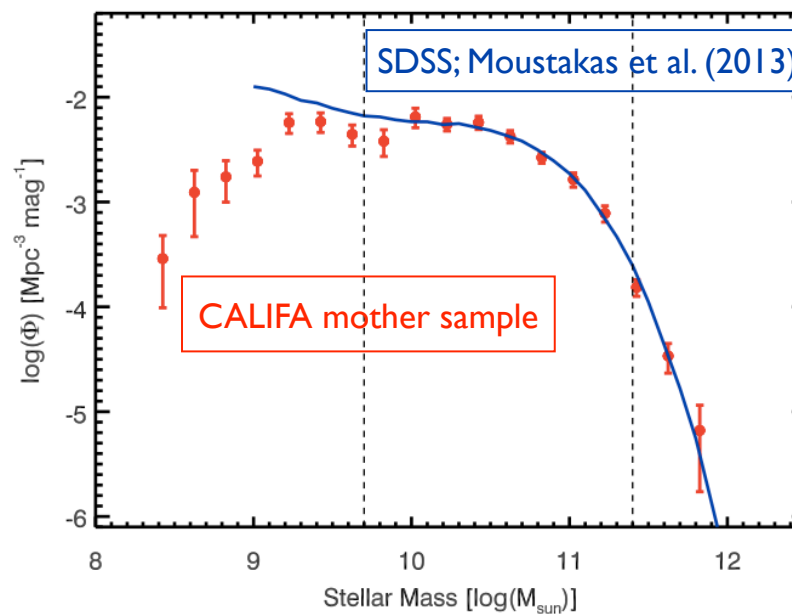

and the **CALIFA team**

# Calar Alto Legacy Integral Field Area Survey

1. Morphologically unbiased
2. Representative in a broad mass range
3. Statistically well defined sample

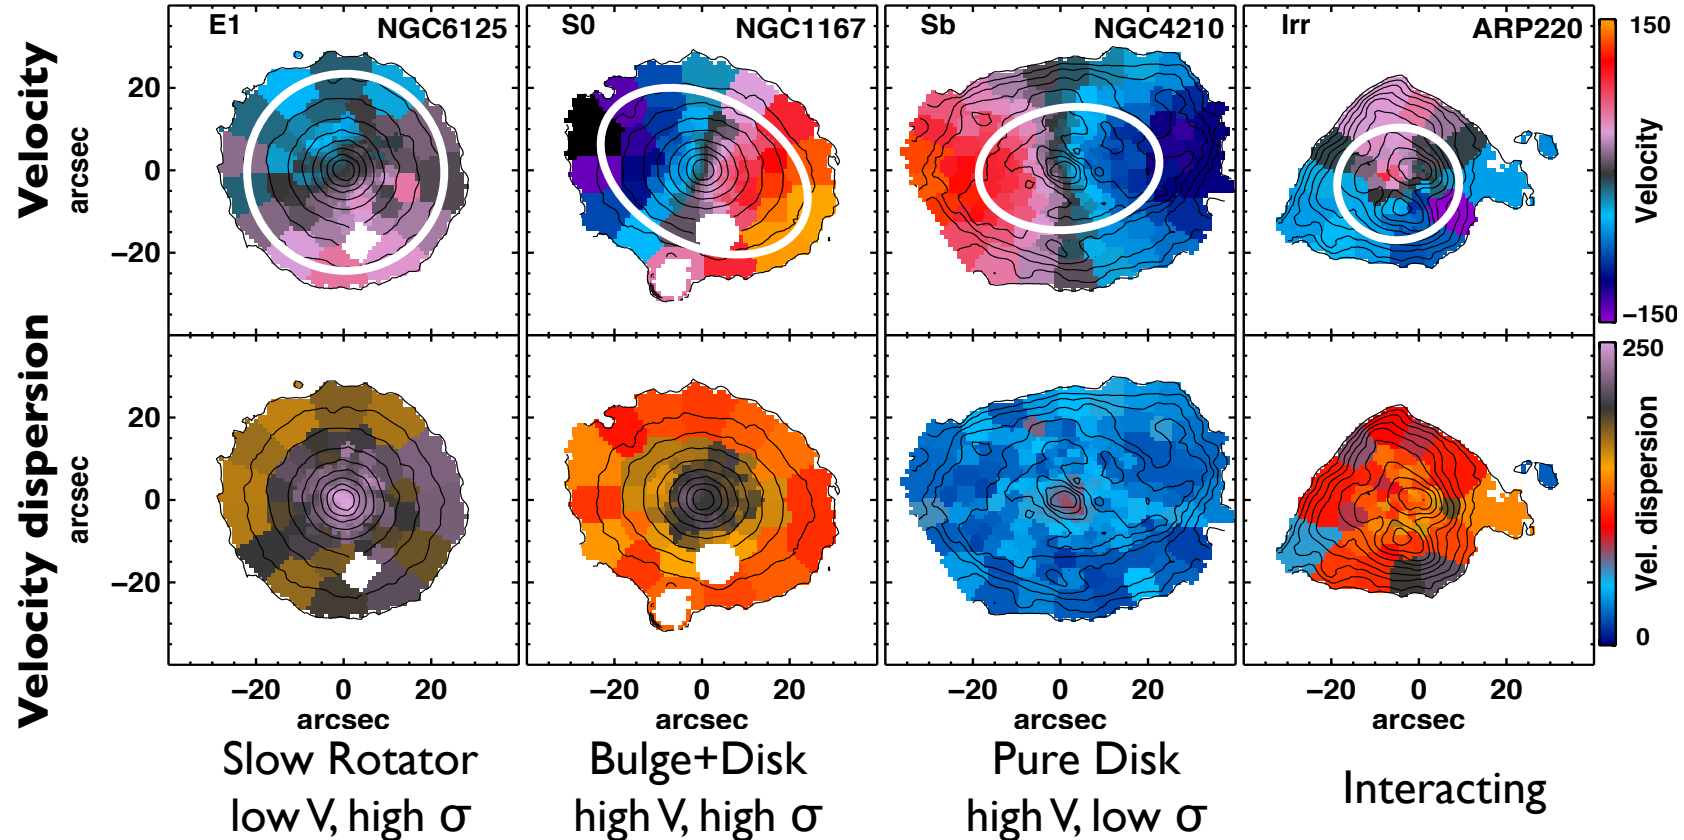

Walcher et al., 2014

subnova  
neurons and  
dark matter in galaxies

CALIFA Survey

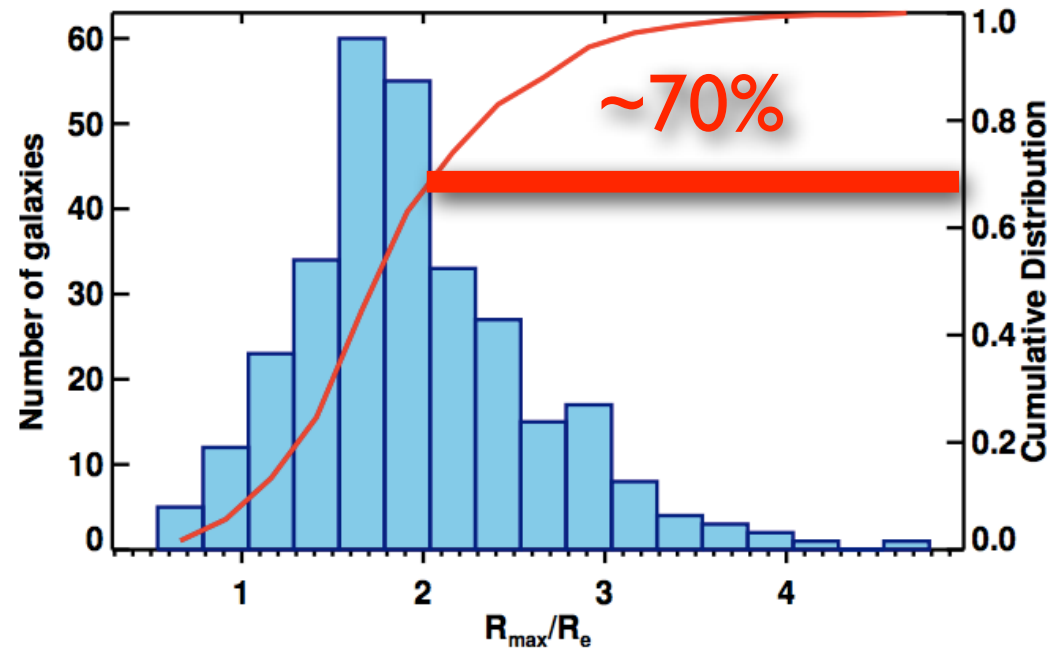

# CALIFA Stellar Kinematics

CALIFA Survey

# 300 galaxies with excellent stellar kinematics

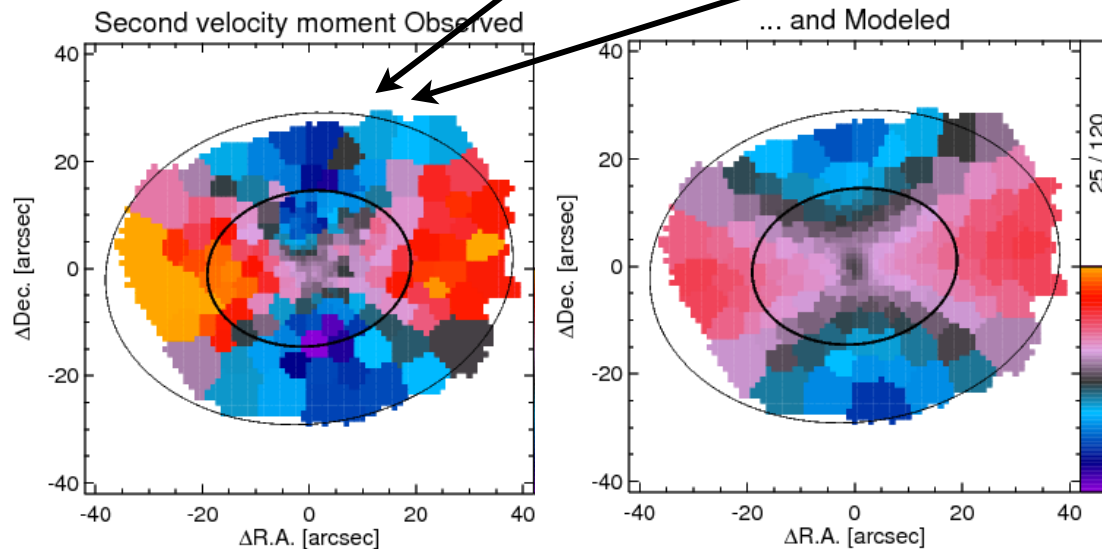

Falc3n-Barroso, Lyubenova, van de Ven et al.,  
*A&A submitted*

CALIFA Survey NGC4210

# Dynamical modeling

- Jeans equations (Lyubenova et al.)
- Schwarzschild orbit superposition (Zhu et al.)
- Distribution functions (Posti et al.)

➔  $M_{\text{tot}}(<R)$

CALIFA Survey

# The interplay between baryons and DM

Stellar masses via  
full spectrum fitting  
(Gonzales-Delgado et al. 2014)

Lyubenova, van de Ven, Falcón-Barroso  
et al., *in prep.*

CALIFA Survey

# Low mass **Late** Type Galaxies

The Interplay between local and global processes, 11 April 2016, Cozumel

Mariya Lyubenova  
The interplay between baryons and  
dark matter in galaxies

CALIFA Survey

# High Dark matter fractions?

Stellar masses via  
full spectrum fitting  
(Gonzales-Delgado et al. 2014)

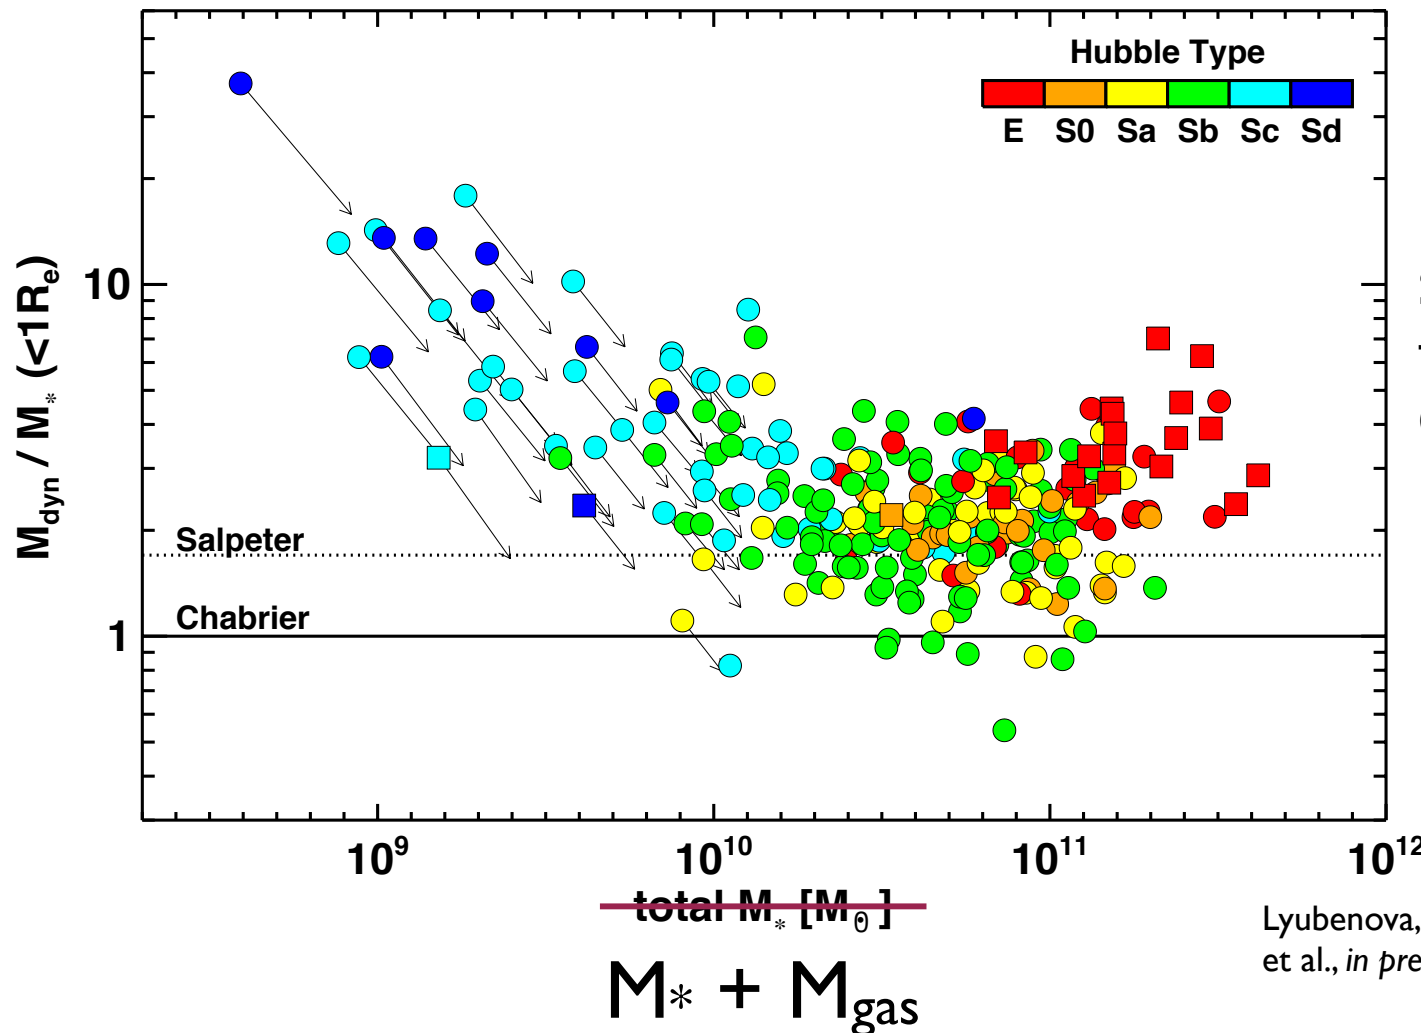

Lyubenova, van de Ven, Falcón-Barroso  
et al., *in prep.*

CALIFA Survey

# High Dark matter fractions?

Stellar masses via  
full spectrum fitting  
(Gonzales-Delgado et al. 2014)

Gas masses via  
Papastergis et al. 2012

CALIFA Survey

# Varying Initial Mass Function?

Stellar masses via  
full spectrum fitting  
(Gonzales-Delgado et al. 2014)

Lyubenova, van de Ven, Falcon-Barroso  
et al., *in prep.*

CALIFA Survey

# Varying Initial Mass Function?

## What does vary?

- the low mass slope
- the high mass slope
- the pivot point
- low mass cut off
- etc...

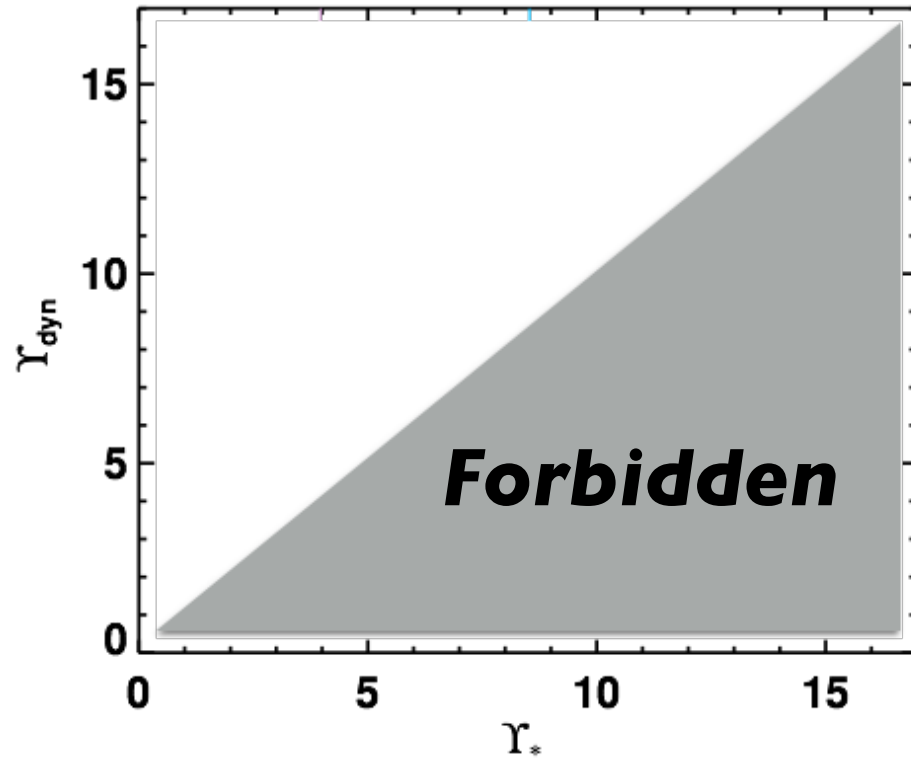

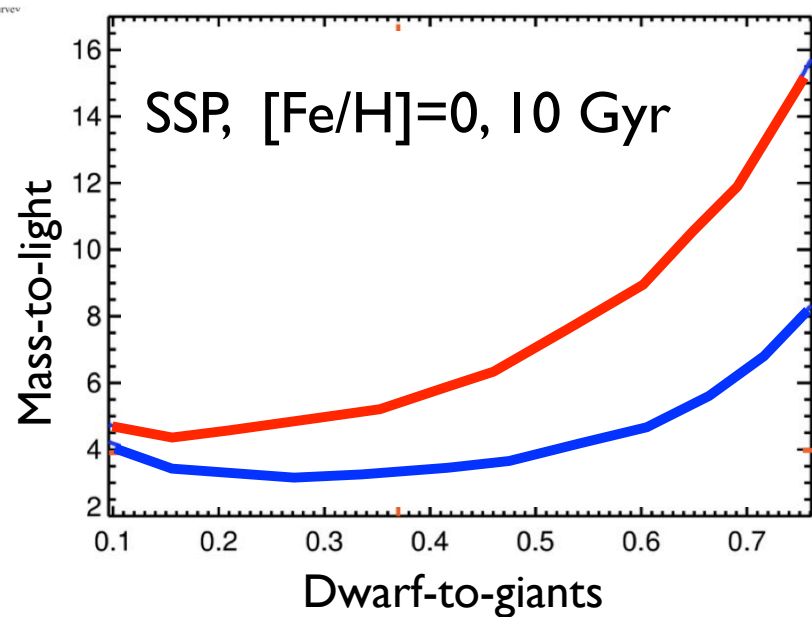

CALIFA Survey

# Dynamical constraints of the IMF shape

$$\Upsilon = M/L_r$$

$\Upsilon_*$  **cannot** be larger than  $\Upsilon_{\text{dyn}}$

# Stellar population analysis

- 27 early-type galaxies with high quality IFU data
- Total stellar mass  $\sim 10^{12} M_{\odot}$
- Stellar population parameters from  $H_{\beta 0}$ ,  $[MgFe]'$ , and  $\underline{TiO}_{2CALIFA}$  (Martin-Navarro et al. 2015)
- MIUSCAT models (Vazdekis et al. 2010)

CALIFA Survey

# Two IMF shapes

# Dynamical constraints of the IMF shape

Lyubenova et al., *MNRAS* submitted

## Single power law

# Dynamical constraints of the IMF shape

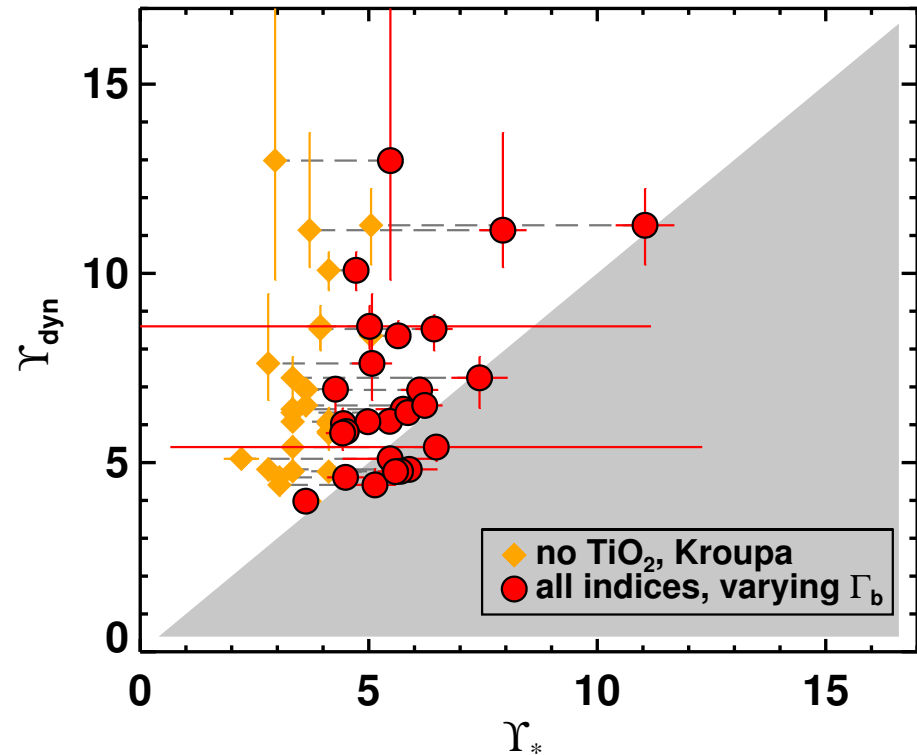

Lyubenova et al., *MNRAS* submitted

## Single power law

## Double power law

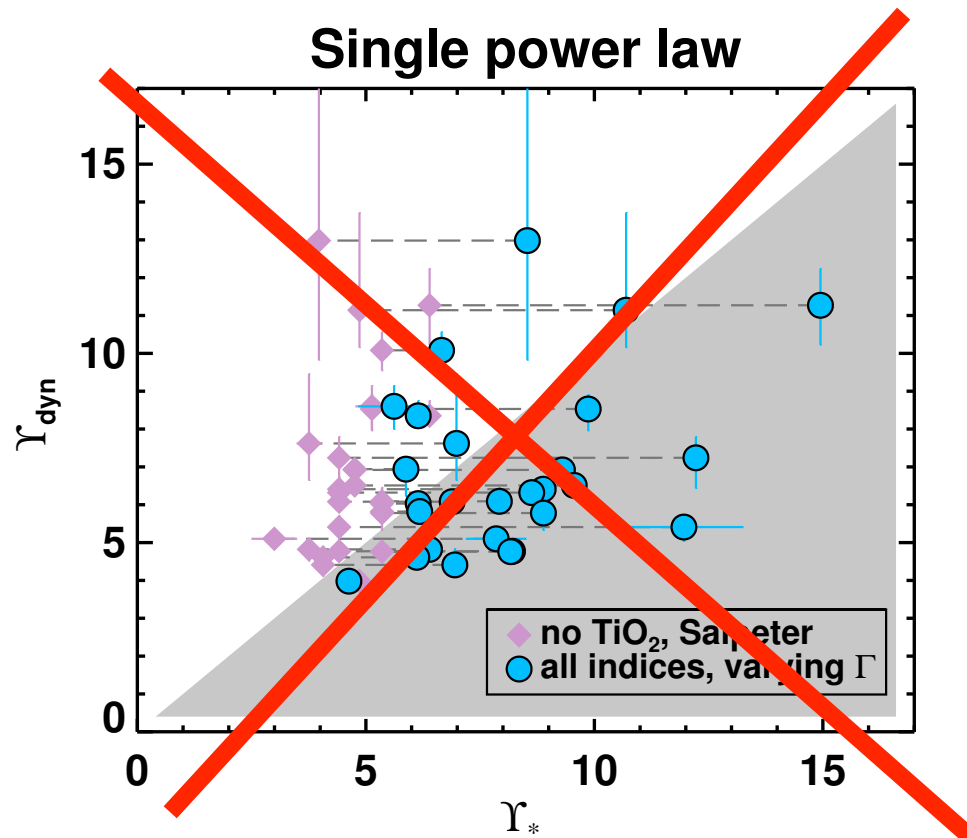

CALIFA Survey

# Dynamical constraints of the IMF shape

Lyubenova et al., *MNRAS* submitted

CALIFA Survey

# Stellar Populations and Dynamics give consistent results about the IMF variation

Smith 2014

- $\alpha = \Upsilon / \Upsilon_{\text{ref}}$  - mismatch parameter
- $\Upsilon_{\text{ref}} = \text{M/L}$  of stellar population with that age, chemistry, and a given IMF

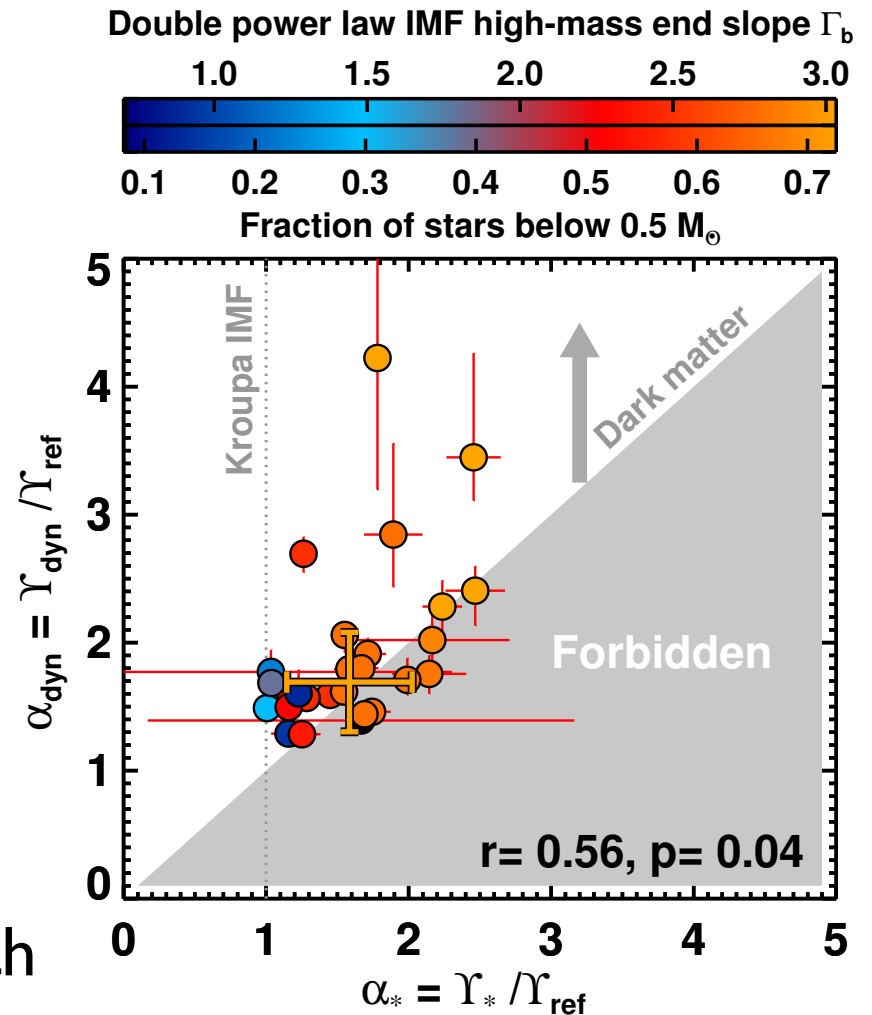

CALIFA Survey

# Stellar Populations and Dynamics give consistent results about the IMF variation

Smith 2014

- $\alpha = \Upsilon / \Upsilon_{\text{ref}}$  - mismatch parameter
- $\Upsilon_{\text{ref}} = \text{M/L of stellar population with that age, chemistry, and a given IMF}$

Lyubenova et al., MNRAS submitted

Mariya Lyubenova

The interplay between baryons and dark matter in galaxies

CALIFA Survey

# Conclusions

- **CALIFA** provides a statistical view of the interplay between baryons and dark matter of galaxies

- Single power-law IMF shape ruled out

- Stellar Populations and Dynamics give consistent results about the IMF variation

- Low mass spirals are heavily dark matter dominated inside  $1 R_{\text{eff}}$

Liya Lyubenova
