

STUDY OF THE GALACTIC STRUCTURE USING DIFFERENT
OBJECTS AS "TRACERS"

ABSTRACT. Until now, the structure of the Galaxy has been derived from various 'tracers' using different manners of evaluating distances, we obtained an image of the Galaxy using 284 HII regions, 248 CO clouds and 187 H₂O-masers. Using these regions, we present maps of the Galaxy centred on the Sun.

Key words: GALAXY-STRUCTURE
