

CALIFA

Calar Alto Legacy Integral Field Area survey

The spatially resolved properties of stars and gas in galaxies from the analysis of CALIFA data included in the 3rd Data Release (DR3, <http://califa.caha.es/DR3>). In each sub-panel the galaxies have been ordered by stellar mass (horizontal axis) and star formation rate (vertical axis) as derived from CALIFA data. The CALIFA DR3 comprises 1576 datacubes, with more than 1.5 million independent spectra, for 667 galaxies. In these plots we restrict the number of galaxies to 464 for clarity of presentation.
